

STRAP WINCH

A SAFER WAY TO CONNECT

Patterson's patented Strap Winch takes safety to a new level. Instead of wire rope, this winch uses lightweight webbed strapping to eliminate springcoil, wild strands, and burns. The end of wire rope means fewer injuries for your crew—which makes a world of difference when it comes to morale, productivity, and profitability.

If you think wire rope is the only way to go, think again. Tests have proven that Patterson's web strapping can handle a heavier load than wire rope can. Ton for ton, the Strap Winch is stronger and more reliable. If you're still using ratchets or wire-rope winches, you owe it to yourself—and your deckhands—to check out the Strap Winch.
